$$W(X,P,t=0) = W_1(X,P,t=0) + W_2(X,P,t=0) + W_{\rm int}(X,P,t=0). \tag{5.70}$$

This function is illustrated in the top row of Fig. 5.4 for the two different limiting cases $\Psi_{\rm pos}(X,t=0)$, see (5.66), and $\Psi_{\rm mom}(X,t=0)$, see (5.67), representing separation in, respectively, position and momentum only. We
